

We need the scraper to query Google, find the results which are Channels, and go to their About page (example <https://www.youtube.com/channel/UCJwmLbwgbSxzH4EbBLkXYAw/about> in text, example <https://www.youtube.com/user/THESNEAKERADDICT/about> behind a button) and output this data into a CSV:

- Channel Name
- Email
- Subscribers
- Total # of Views
- Channel URL
- Social / Other Links (URLs of their links in their header area like their instagram, their Twitter, their website, etc.)

Email is the most important, along with subscribers and total # of views.

Please create one G Sheet with each of these going on a separate tab:
